EDUCATION

Delhi Technological University

Bachelor of Technology in Electronics & Communication Engineering

New Delhi

2022 – 2026

EXPERIENCE

Data Analyst Intern — GoldRush Jewels

Jan 2026 – Apr 2026

New Delhi

- Cleaned and transformed 11 months of jewelry transaction data (300+) using Python and SQL, standardizing inconsistent location names and resolving missing customer records through record matching and data imputation.
- Developed interactive **Power BI dashboards** enabling stakeholders to monitor **INR 35L+ revenue**, **repeat purchase rate (26.9%)**, and locality-wise sales across **30+** Delhi localities.
- Found that **Tuesday** sales matched weekend volumes and that **bangles/chains** were the top-selling categories, a finding used to rebalance store inventory toward high-turnover items.

Analyst Intern — HawkEye Capital

Jul 2025 - Aug 2025

New Delhi

- Analyzed portfolio and mutual fund datasets using Excel and Python to assess returns, diversification, and asset allocation across **10Cr+ AUM**.
- Benchmarked **50+** mutual funds on returns, volatility, Sharpe Ratio, AUM, and manager performance.
- Created Tableau dashboards and portfolio reports to monitor fund performance and support investment reviews.

PROJECTS

Credit Default Risk Modeling [\[LINK\]](#) | *Python, SQL, Logistic Regression, XGBoost, SHAP, Power BI*

- Built an end-to-end credit default risk model on **807K+ LendingClub loans**, engineering leakage-free features from raw applicant data to ensure predictions reflect only information available at time of application.
- Compared **Logistic Regression** and **XGBoost** on imbalanced default prediction (**22% base rate**) via ROC-AUC/PR-AUC, and applied **SHAP** to identify interest rate, DTI, and credit grade as top default drivers.
- Analyzed default risk across credit grade, loan purpose, and borrower demographics using SQL, then built an executive Power BI dashboard translating model and business findings into underwriting-ready insights.

E-Commerce Funnel Analytics [\[LINK\]](#) | *Python, Power BI*

- Modeled session and user-level conversion funnels on **42.4M events** across **9.24M sessions**, pinpointing a **93.8% view-to-cart drop-off** as the single largest revenue leak in the funnel.
- Discovered a funnel anomaly where **purchase sessions (629K) exceeded cart sessions (573K)**, isolating **337,699 direct "Buy Now" purchases** that bypassed the cart stage entirely.
- Identified **electronics.smartphone (9.2%)**, **Samsung (8.39%)**, and **4AM–9AM** as the highest converting category, brand, and time window respectively via brand, category, and hourly analysis.

Customer Analytics Using Cohort & RFM Analysis [\[LINK\]](#) | *SQL, Python, Power BI*

- Analyzed **99.4K+ orders** across **96.1K+ customers** on an e-commerce dataset using cohort analysis, measuring **0.48% Month-1 retention** and revealing that **96.88%** of customers made a **single** purchase.
- Derived **RFM scores** to classify customers into **7 segments** — **38.5% Potential Loyalists** and **38.3% Lost Customers** dominated the base, with Champions generating significantly higher average order value.
- Built an interactive **Power BI dashboard** combining cohort retention curves, RFM segment distribution, and revenue trends, with RFM segmentation independently confirming the single-purchase retention finding.

TECHNICAL SKILLS

Languages: SQL(Advanced), Python

Libraries: Pandas, NumPy, PySpark, Scikit-learn, Matplotlib, Seaborn

Databases: PostgreSQL, Oracle SQL, MySQL

Analytics: Machine Learning, EDA, KPI Analysis, Ad-hoc Analysis, Statistical Analysis, A/B Testing, Root Cause Analysis, Causal Inference, Hypothesis Testing, Forecasting, Cohort Analysis, Funnel Analysis, RFM Analysis

Business Skills: Stakeholder Management, Cross-functional Collaboration, Data-Driven Decision Making

Visualization: Power BI, Tableau, Advanced Excel, PowerPoint

Tools: AWS, Databricks, Git, Jupyter Notebook, VS Code
